Survey conducted Friday, March 26th and Monday, March 29th, 2004.

* Counties were deemed to have given partially or substantially incorrect answers if they identified three or less acceptable forms of ID to surveyors. HAVA broadly defines six categories including current and valid photo identification, a copy of a current utility bill, bank statement, government check, paycheck, or other government document that shows the name and address of the voter. We also credited local boards with a 'right response' when they identified a particular type of ID that would fall in the above categories. For example, Boards that listed passports or Sheriff's IDs were counted as providing a correct form of ID. This study considered a county's listing of both a driver's license and non-driver ID as a single acceptable form of ID.

** "Social Security Numbers" refers to a response that a voter would have to provide a full social security number or a response that only the last four digits of a social security number would be required.
